Office Action Summary

Art Unit: 2834

Claims 17-24 are rejected under 35 U.S.C. 103 as unpatentable over Corwin in view of Haertling for the specific reasons set forth in paper no. 27 (6-19-01).

Applicants remarks of concave vs. Convex prestress layer are noted, however, the broad teaching is that the piezo element should be protected from breaking via going into tension. This necessity is not limited to internal or external prestressing.

Making parts integral or separable is still seen as a valid assessment of the claimed situation. "Large" mechanical output may be desired by applicant. Corwins output may be relatively "small" but such differences are not reflected in the actual claimed structure.

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
